		145 (1000)	96300 (43700)	85800 (38900)	77700 (35200)	72300 (32800)	69700 (31600)	68100 (30900)	67000 (30400)

IMPORTANT: Loads shown in the above table are for the tire only. The rim manufacturer must be consulted to determine the suitability of the rim/wheel for the intended service. Industrial vehicles consist of vehicles such as counterbalanced lift trucks, container handlers, straddle carriers, aircraft tow tractors, pavers, mobile crushers, log stackers and rough terrain fork lifts.

Creep is defined as movement at very slow speed, not over 200' (60 m) in 30 minutes. During creep motion loads on tires are very high. Consideration must be given to the type of surface over which the equipment is travelling.

Smooth floors and runways are defined as paved or protected surfaces which are free of undulations, obstructions or discontinuities.

NOTES:

- The small index numbers denote ply rating for which accompanying loads and inflations are maximum.
- For variable loading operations where loads increase or decrease, the load per tire when the vehicle is empty must be less than 40% of the load on the tire when the vehicle is fully loaded. Maximum load may not be carried for more than one mile before unloading operation starts. Loading or unloading must be completed within one mile.

- For operations at other speeds with no change in inflation pressure, the loads in the above table may be changed as follows:

- Creep Speed is a travel rate of not over 200 feet in a 30 minute period.

MAXIMUM SPEED (mph)	% CHANGE IN LOADS
20	+12
10	+32
5	+58
*Creep	+100
Stationary	+165

NOTES: 1. Number in parentheses denote ply rating or load range for which loads and inflations are maximum..

2. For 10 MPH service, the above loads must be reduced 21% at the same pressures.

- NOTES:
- Figures in (parentheses) denote ply rating or load range for which bold face loads and inflations are maximum. Numbers after ply ratings are Load Index numbers.
 - For shipping purposes, tire inflation pressure may be increased to 30 psi (210 kPa). Inflation pressure must be adjusted to correct operating pressure before skidder is removed from carrier. Consult tire manufacturer for minimum tire shipping pressure.
 - "Tire Load Limit" for log skidders is defined as the maximum load for an individual tire due to the total radial forces imposed on the tire DURING OPERATION. This maximum load includes total vehicle weight with accessories and weight transfer. For grapple and cable skidders, refer to the table below.
 - For load and carry type of logging operations such as loaders equipped with log forks and feller-bunchers, with maximum speed of 5 mph (10 km/h), above tire load limits may be increased 50% with 5 psi (35 kPa) increase in inflation pressure. Maximum length of carry is 500 feet (150 m).
 - When used as duals, tire loads must be reduced. Multiply figures in table by .88.
 - Consult rim and wheel manufacturer for rims for this type of service.
 - For transport service and operations that do not require sustained high torque, the following load limits apply:

MAX SPEED	% CHANGE IN LOADS	CHANGE IN INFL. PRESSURE
STATIONARY	+170	+5 PSI (30 kPa)
10 MPH (15 KM/H)	+20	NONE
15 MPH (25 KM/H)	+15	NONE
20 MPH (30 KM/H)	NONE	NONE
25 MPH (40 KM/H)	-10	NONE

- NOTES:
- Figures in (parentheses) denote ply rating or load range for which bold face loads and inflations are maximum.
 - For shipping purposes, tire inflation pressure may be increased to 30 psi (210 kPa). Inflation pressure must be adjusted to correct operating pressure before skidder is removed from carrier. Consult tire manufacturer for minimum tire shipping pressure.
 - "Tire Load Limit" for log skidders is defined as the maximum load for an individual tire due to the total radial forces imposed on the tire DURING OPERATION. This maximum load includes total vehicle weight with accessories, plus load increases due to log winching or grapping loads and weight transfer.
 - The table above applies only to log skidder tires used on cable or grapple skidders with a maximum speed of 5 mph (10 km/h). For use on other types of logging or forestry equipment or at speeds greater than 5 mph (10 km/h) refer to the table at the top of this page.
 - When used as duals, tire loads must be reduced. Multiply figures in table by .88.
 - Consult rim and wheel manufacturer for rims for this type of service.
